

References

Environmental

Mixer with double wall casing.
Rotor with extraction impeller.

Construction

Compact systems placed on
base plates or special container
technology.

Other Systems

Units according to own or
customer specified designs,
installed, tested and documen-
ted.

Control Valve Systems

Control valves, filters, shut-off
valves, apparatus, instrumen-
tation, control units etc.
Installed on open-base frame.
Verification of function in factory.

Whether large, small, complex or simple, we can build your systems

We are a successful Swiss engineering, machine and systems manufacturer. Our 100 or so professional staff develop, construct, make and build parts, machines and systems.

Our in-house expertise comprises all areas of the complete order, including engineering, assembly, and complex certified weldment construction.

Our customer base includes domestic and international companies. We take on the responsibility for the solution process and manufacturing in our workshops as well as overall project management.

For your next project, you can rely on us and our efficient customer-supplier cooperation with Swiss-quality.

One order, one supplier

When price cutting from competitors threatens or production costs overseas are cut, this is called "rationalisation". Our answer to the challenge is "turn-key" systems or "**Plug & Play**", based on our core competences.

We invite you to compare prices: your total costs compared with our "Plug & Play" solution.

Your advantages:

- fewer logistical issues
- fewer personnel issues
- less administration
- fewer interface problems
- reduced testing issues
- fewer construction and start-up problems
- fewer risks

lower total costs

Our core competence

Our strengths lie in the systems we build up from the detailed specification, as well as the manufacturing process, testing and delivery of the turn-key system, according to the customer's specification.

- project management
- realisation of customer specification
- selection or recommendation of used components
- lay-out
- purchase specification
- production specification
- manufacturing and installation
- testing, test documentation
- packing and delivery logistics
- commissioning & services

Our experience

- automation & handling
- food production
- power technology, power plant components
- research & development, chemical systems
- water, oil & fuel supply
- hydraulic & injection systems
- pressure testing moduls (water/oil)
- general machine tool manufacturing
- transportation, environmental, disposal
- defence, aerospace

Your Guarantee

With our experience and versatility we can guarantee an optimal safety process, as well as manufacturing qualities: ISO 9001:2008, ISO 3834-2:2005, ASME, PED.

Reference Projects

Technology Container

A technology container contains electro components, distribution, fire protection, climate control. All assembled and tested.

Pump Skid

A technical container contains pumps, motors, filters, valves, apparatus, instrumentation, climate control. All assembled. Systems are flushed and commissioned on-site.

Instrumentation Racks

Instruments and valve components systematically arranged. Pressure tested and pre-calibrated.

Compressor Skids for Off-Shore Operations

Assembly, pipe work, instrumentation and wiring of base skid. Motors, gearboxes, compressors and instrumentation, plus pressure testing and final documentation.
